

Air motors 2,2 kW with integrated brake

Air motors with integrated brake, speed under load 75 - 2.800 rpm, torque 7,5 - 282,0 Nm, holding load of brake 15,0 - 620,0 Nm

Product description

The model MUB 300 is equipped with a **friction force brake with spring load**. This brake is controlled by a separate control air line which must receive compressed air earlier than the motor itself. The brake guide air line must receive at least 4,8 bar to release the brake (no pressure means the brake is applied).
