

Air motors 4,4 kW with integrated brake

Air motors with integrated brake, speed under load 75 - 2.800 rpm, torque 15,0 - 563,0 Nm, holding load of brake 20,0 - 735,0 Nm

Product description

The model MUB 600 is equipped with a **friction force brake with spring load**. This brake is controlled by a separate control air line which must receive compressed air earlier than the motor itself. The break guide air line must receive at least 4,8 bar to release the brake (no pressure means the brake is applied).
