

## 440-3-PZD Pozidriv® bit

Pozidriv® Bit, PZ3, 25 mm length

### Product description

Pozidriv is a development of the Phillips cross head for higher speed screwdriving in torque-limited machines. In contrast to the Phillips profile, the flanks of the output are milled plane-parallel. As a result, they do not taper and the larger surface makes it easier to screw in the screw.

To avoid confusion with the Phillips profile, four lines are marked at a 45° angle on the screw head.

Pozidriv screwdrivers cannot be used with Phillips screws. Conversely, Phillips screwdrivers can be used to a limited extent with play.

**Product properties**

|                               |                                                                                                                   |
|-------------------------------|-------------------------------------------------------------------------------------------------------------------|
| <b>Drive</b>                  | 1/4" hex drive                                                                                                    |
| <b>Form</b>                   | C                                                                                                                 |
| <b>Material</b>               | High-alloy tool steel, heat treated                                                                               |
| <b>Advantages</b>             | no chrome vanadium, but tool steel (does not splinter when overloaded) Suitable for hand tools and rotating tools |
| <b>Additional information</b> | Meets industrial requirements                                                                                     |
